DETAILED ACTION***Election of Species***

This application contains claims directed to the following patentably distinct species of the claimed invention:

A first species depicted in Figure 2.

A second species depicted in Figure 3.

A third species depicted in Figure 4.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, at least claim 1 appears generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).

Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The abstract of the disclosure is objected to because of the following errors.

Line 1: Change "arrangement" to -- arranged --.

Art Unit: 2819

Line 4: Change "an electromagnetic" to -- electromagnetic --.

Correction is required. See MPEP § 608.01(b).

The disclosure is objected to because of the following informalities:

Page 1, line 7: Change "are known" to -- is known --.

Page 1, line 21: Change "iris" to -- irises --.

Page 1, line 26: Change "coupling" to -- coupled --.

Page 1, line 30: Delete "said."

Page 1, line 33: Change "filter" to -- filters --.

Page 2, line 7: Change "characterise" to -- characterize --.

Page 2, line 12: Change "characterisation" to -- characterization --.

Page 2, line 30: Change "minimised" to -- minimized --.

Appropriate correction is required.

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 6,559,740 to Schulz et al discloses a cross-coupled bandpass filter having a plurality of sequentially located resonator cavities interconnected by in-line couplers. U.S. Patent 5,812,036 to Estrada describes a filter comprising a plurality of resonator stages arranged such that at least one non-sequential pair of stages are physically adjacent. U.S. Patent 5,783,979 to Andoh et al provides a resonator device having a single window for coupling two pairs of resonator columns.

Art Unit: 2819

U.S. Patent 5,512,906 to Speciale describes a system of densely packed resonant cavities configured in a matrix array. U.S. Patent 5,698,928 to Mang et al provides an array of piezoelectric resonators. U.S. Patent 4,547,748 to Ballato presents a matrix of selectable piezoelectric resonators.
